The ice cap is melting, and 84 penguins must find a new place to live. But what nice places are left on Earth that haven't been polluted yet ?

A family of penguins realizes the ice cap is melting. Soon, it will disappear. They have to move. They've heard of many wonderful places on Earth : the South Seas, the eastern steppes, the northern forests, hills of flowers in the west... Why not try these out ? But it's dirty and polluted wherever they go. So it's off to the Moon, and from there, our blue planet looks so beautiful: maybe if we all work together, we can restore the Earth's beautiful landscapes?
