Helping young people make greener choices!

This book breaks down today's environmental controversies by accessibly introducing readers to such key concepts as environmental impact, ecological footprint, carbon footprint, and lifecycle analysis. Its 18 everyday examples are divided into six categories (climate change, consumption patterns, energy, biodiversity, waste and recycling, natural resources). Options for action available to young ecologists are highlighted in brief texts and lists of helpful tips of what is advisable and what best avoided. Funny, lighthearted illustrations accompany readers in their deep dive into today's pressing topics.
