The Power of Plants

Author: Valentin Hammoudi

Publisher : Humensciences

Category : Humanities and Non-Fiction

Genres : Ecology - Science Culture

Keywords : Plants - Science - Ecology - Dietetics -
Social climbing

Élisa Rodriguez, Foreign Rights Manager

"An accessible work surveying the latest knowledge in plant biology and the relationship between technology and the environment."

Valentin Hammoudi draws on the latest findings about plants to explore their sensibilities and their intelligence. Can they remember things? How do they communicate? Why will peeling a banana soon be more interesting than ever before? Hammoudi tackles controversial topics through a scientific lens without veering into an anthropocentrist point of view. The answers science provides move us closer to solutions for our current crisis. Plants points the way toward decreasing air and soil pollution, producing electricity, and even creating bioplastics.
