This book traces the trajectory of mobility from the automobile of the 1920s to the future of the 2050s.

Valeo has been behind many innovations in the mobility industry for the last century, a pioneer in the development of electric motors for all kinds of new uses. Our technology can now be adapted to a small motorcycle or tuk-tuk in India, a driverless cab in China, and even an autonomous delivery droid. This book retraces all these innovations: from Ferodo's first clutch innovations to the latest sensors and software in Tesla's self-driving cars. The 20th century was the century of the automobile, and the 21st will be the century of electric mobility of all uses.
