

Cities 2050

10 Things Climate Architecture Can Do for a Better Future

Authors: Vincent Callebaut - Arnaud Pagès

Publisher : Eyrolles

Category : Science, Technology, Medicine

Genres : Construction

Keywords : Architecture - Environment - Ecology

A handsome coffee table book with astonishing images accompanied by a reflection on tomorrow's cities.

While the world's biggest cities are aiming for carbon neutrality by 2050 through various Green New Deals, architect Vincent Callebaut is proactive about his ideas for inspiring young generations with an optimistic, desirable future in a symbiotic relationship with nature. He advocates starting today with 10 architectural actions that will climatically revolutionize our modes of habitat as well as our ways of working and living together in order to build a more inclusive, united world that is respectful of the environment.
